

# PVA iTrashcan Module

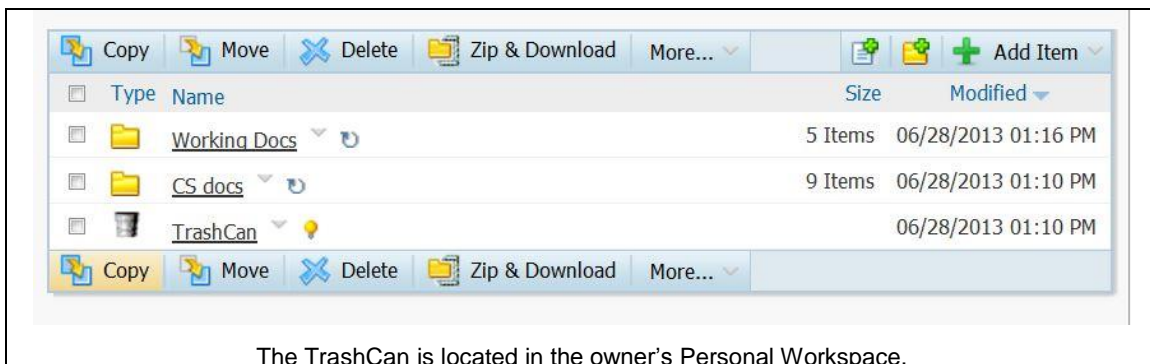

## for Livelink 9.7.x and Content Server 10.x

### *iTrashcan – Your Users’ Safety Net*

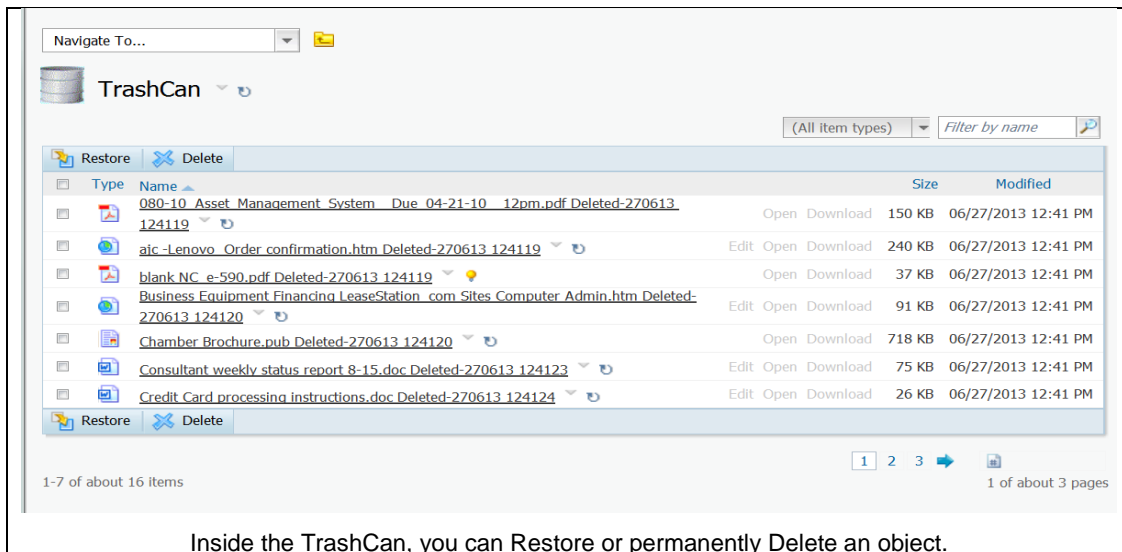

Users mistakenly delete documents and other objects from time to time. When that happens, they need to be able to restore them. With the iTrashcan module, Livelink and Content Server users can easily restore deleted objects, including collections, workflow maps, documents, folders, and even folder structures!

The iTrashcan Module allows:

- Recovery of nearly all object types
- A single, Admin-owned TrashCan for the system, or a TrashCan for each user
- Highly configurable permissions for deleted items
- Fully configurable auto-purging of TrashCans

The TrashCan is located in the owner's Personal Workspace.

Inside the TrashCan, you can Restore or permanently Delete an object.
